Portfolio Changes Update

Implemented Portfolio Changes

Partners Short Term Portfolio

No changes.

Partners Medium Term Portfolio

At ~62c, the AUD appears undervalued against the USD, presenting an opportunity to increase AUD hedging. In the near term, stronger growth prospects and rising interest rate expectations in the US create headwinds for the AUD. Consequently, we modestly increased hedging to a mild overweight position, with the flexibility to raise it further if Australia's relative growth outlook improves. Within the international shares component of the portfolio, **GQG Partners Global Equity**, **Aoris International** and **Fiera Atlas Global Companies** were trimmed, with the proceeds reallocated to **iShares Hedged International Equity Index**.

Partners Long Term Portfolio

We hold concerns about elevated valuations in the Australian market, particularly given the weak domestic economy and subdued growth outlook. These concerns are most pronounced in the Australian banking sector, which represents a substantial portion of the ASX 200 Index. Given these dynamics, sector and security selection will be key to near-term returns, warranting particular caution on index allocations heavily exposed to Australian banks.

To modestly reduce exposure to Australian shares, shift from a mild overweight to neutral in *value* strategies within international shares, and increase AUD hedging, **Macquarie True Index Australian Shares** and **Fiera Atlas Global Companies** were trimmed, and global value manager **Pzena Global Focused Value** was exited. The proceeds were then used to accommodate the introduction of **Life Cycle Global Share Hedged** and an increased allocation to **iShares Hedged International Equity Index**.

Partners Multi-Asset Income Portfolio

No changes.

New Funds

Life Cycle Global Share Fund

The Life Cycle Global Share Fund is a core-style global equity portfolio of 150-250 companies with the aim of outperforming the MSCI World Net Total Return Index by 1-1.25% p.a., after fees, across multiple market conditions. Companies are selected using a distinctive and proven Corporate Life Cycle-inspired investment approach and

combined into a concentrated portfolio with relatively balanced style characteristics where stock-picking success is the primary driver of relative returns.

Life Cycle Investment Partners is a London-based boutique investment manager established in 2024 by the same investment team that previously managed the same strategy at Royal London Asset Management. Life Cycle Investment Partners is majority employee-owned and supported by Pinnacle Investment Management Group, a leading Australian multi-affiliate asset manager based in Sydney. The investment team is headed up by senior portfolio managers Peter Rutter, Will Kenney, and James Clarke, each with over 20 years of experience successfully managing global equities and over a decade of working together. The three are joined by portfolio managers Chris Parr, Joseff Thomas, and Niko de Walden, all previously portfolio managers at Royal London, and one analyst.

The team's investment philosophy is built on four principles: 1) business fundamentals are the most important driver of share prices over the long term; 2) different fundamentals matter at different stages of a company's life cycle; 3) enduring inefficiencies cause temporary mispricing of these fundamentals; and 4) by taking advantage of its differentiated investment process, it is possible to identify and exploit these mispricings repeatedly. A proven and rigorous investment process refined over 20 years is based on bottom-up, fundamental analysis but also utilises quantitative tools to prioritise research and assist with portfolio construction and risk management. Idea generation starts by putting 5,000 companies through a proprietary quantitative screen to filter out all low-quality companies and classify those remaining according to their position in the corporate life cycle – accelerating growth, compounding, slowing and maturing, mature and turnaround – and determine those companies with wealth creation potential. Stock selection involves using an in-house qualitative process to assess each company's internal, external, and management factors. Detailed fundamental research and valuation analysis is conducted on the best companies to determine those suitable for inclusion in the portfolio.
